

SILVER NOVA REVOLUTIONIZES TRAVEL

Optimizing a new vision of luxury, Silversea's latest flagship will lead their fleet into sustainable cruising, respecting the fragile ecosystems of the remote and remarkable destinations they visit. The ship will debut in the summer of 2023 and then an as-of-yet unnamed sister ship is scheduled to come out in May of 2024.

A NEW ARCHITECTURE

Silver Nova is the first ship in their fleet to feature all-balcony suites, and is the only ship to feature the all new Otium Suite. Her groundbreaking horizontal design offers a new dimension in luxury cruising, fusing seamless public areas together to offer a brand new vision of cruising. A brand new selection of 270° view aft suites means that *Silver Nova* will sail their fleet towards the future.

SUSTAINABILITY

The ship is a leap forward in Silversea's commitment to sustainable design and their journey to reduce their environmental footprint. Not only will she feature a mix of advanced technologies, but she will be the first hybrid, luxury cruise ship free of emissions while in port – an industry first.
